PROFESSIONAL SUMMARY

Aspiring Game Designer with a strong foundation in C++ object-oriented programming, gameplay logic development, and version control workflows. Experienced in building interactive console applications, designing game mechanics, and leveraging tools like Git and Visual Studio. Adept at problem-solving and technical systems design, combining structured programming practices with creative game design principles.

SKILLS

- **Programming Languages:** C++, HTML5, CSS3
- **Game Design & Tools:** Object-Oriented Programming (OOP), Gameplay Logic, State Machines, Git / GitHub, Visual Studio, Bambu Studio / 3D Asset Integration
- **Core Competencies:** Input Validation, Algorithm Optimization, Debugging, Modular Architecture, Technical Documentation

PROJECTS

Rock-Paper-Scissors Console Application | *Personal Project*

Developed a custom, interactive C++ console game demonstrating core game loops, object-oriented design, and robust user input handling.

- **Game Loop & Logic:** Designed a modular game architecture utilizing conditional state checks and pseudo-random generation (`std::srand`) for unpredictable AI behavior.
- **Input Sanitization:** Built custom input validation logic using `std::cin.clear()` and buffer flushing to eliminate runtime exceptions and infinite loops.
- **Score & State Tracking:** Implemented real-time win/loss/draw tracking and seamless replay transitions using clean `do-while` control structures.

C++ Game Systems & Architecture | *Full Sail University Coursework*

Engineered a series of technical C++ projects focusing on data structures, algorithmic efficiency, and core gameplay mechanics.

- Applied Object-Oriented Design (OOP) principles including class encapsulation, inheritance, and vector manipulation to build modular codebases.
- Utilized Git version control across multi-branch workflows (`dev` to `main`), managing issue boards and pull request pipelines.

EDUCATION

Bachelor of Science in Game Design

Full Sail University | [Expected Graduation Date, 2027]

- **Relevant Coursework:** C++ Programming, Discrete Mathematics, Data Structures, Software Engineering Fundamentals, Game Mechanics Design
